

**Table 8. Existing State air emissions legislation with potential impacts on the electricity generation sector**

<i>State</i>	<i>Activities</i>	<i>Emissions limits</i>
<i>Connecticut</i>	Regulations for electric utility, industrial cogeneration, and industrial units	
	SO <sub>2</sub> emissions Phase I limit by 2002. ....	0.55 pound per million Btu input
	SO <sub>2</sub> emissions Phase II limit by 2003. ....	0.33 pound per million Btu input
	NO <sub>x</sub> limit. ....	0.15 pound per million Btu input
	Mercury emissions limit by July 2008. ....	90% removal (or maximum of 0.6 pound mercury emitted per trillion Btu input, equivalent to 0.005-0.007 pound mercury per gigawatthour)
<i>Maine</i>	Regulation for greenhouse gas emissions reduction from all sectors	
	Greenhouse gas emissions by 2010. ....	At 1990 levels
	Greenhouse gas emissions by 2020. ....	10% below 1990 levels
	Greenhouse gas emissions in the "long term". ....	75% to 80% below 2003 levels
<i>Massachusetts</i>	Multi-pollutant cap for existing power plants	
	SO <sub>2</sub> emissions in 1999: 6.7 pounds per megawatthour	
	SO <sub>2</sub> cap 2004 or 2006 (depending on compliance strategy) . . . . .	6.0 pounds per megawatthour
	SO <sub>2</sub> cap 2006 or 2008 (depending on compliance strategy) . . . . .	3.0 pounds per megawatthour
	NO <sub>x</sub> emissions in 1999: 2.4 pounds per megawatthour	
	NO <sub>x</sub> cap 2004 or 2006 (depending on compliance strategy) . . . . .	1.5 pounds per megawatthour
	CO <sub>2</sub> emissions (current): 2,200 pounds per megawatthour	
	CO <sub>2</sub> cap 2006 or 2008 (depending on compliance strategy) . . . . .	1,800 pounds per megawatthour
	Mercury emissions cap, Phase I, January 2008. ....	85% removal from 2004 levels or 0.0075 pound per gigawatthour
	Mercury emissions cap, Phase II, October 2012. ....	95% removal from 2004 levels or 0.0025 pound per gigawatthour
<i>Missouri</i>	Summer NO <sub>x</sub> regulations by May 2004. ....	0.18 to 0.35 pound per million Btu input
<i>New Hampshire</i>	Regulation for existing fossil-fuel power plants	
	SO <sub>2</sub> emissions in 1999: 48,000 short tons	
	SO <sub>2</sub> cap 2006. ....	7,289 short tons
	NO <sub>x</sub> emissions in 1999: 9,000 short tons	
	NO <sub>x</sub> cap 2006. ....	3,644 short tons
	CO <sub>2</sub> emissions in 1990: 5,426 thousand short tons	
	CO <sub>2</sub> emissions in 1999: 5,594 thousand short tons	
<i>New Jersey</i>	CO <sub>2</sub> cap 2006. ....	5,426 thousand short tons
	Greenhouse gas emissions in 1990: 136 million metric tons carbon dioxide equivalent	
<i>New York</i>	Greenhouse gas emissions 2005. ....	3.5% below 1990
	Regulations for electric utilities, cogenerators, and industrial units	
<i>New York</i>	SO <sub>2</sub> Phase I limit January 2005, 25% below allocation. ....	197,046 short tons
	SO <sub>2</sub> Phase II limit January 2008, 50% below allocation. ....	131,364 short tons
	NO <sub>x</sub> limit beginning in October 2004 (October 1 to April 30 cap) . .	39,908 short tons
<i>North Carolina</i>	Regulations for existing coal-fired plants only	
	SO <sub>2</sub> emissions in 1999: 429,000 short tons	
	SO <sub>2</sub> cap 2009. ....	250,000 short tons
	SO <sub>2</sub> cap 2013. ....	130,000 short tons
	NO <sub>x</sub> emissions in 1999: 178,000 short tons	
<i>North Carolina</i>	NO <sub>x</sub> cap 2009. ....	56,000 short tons
	CO <sub>2</sub> regulation for new or expanded power plants. ....	675 pounds per megawatthour
<i>Oregon</i>	Senate Bill 7, SO <sub>2</sub> and NO <sub>x</sub> caps for grandfathered sources	
<i>Texas</i>	SO <sub>2</sub> cap 2003. ....	595,000 short tons
	NO <sub>x</sub> cap 2003. ....	302,000 short tons
<i>Washington</i>	CO <sub>2</sub> regulations for new fossil-fueled power plants. ....	20% reduction over 30 years
